Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	2 October 2026
Team ID	SWTID-2026-5435
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Laptop Request Submission	Request through the service portal catalog item Selection from the approved standard laptop models Auto-fill of requester and department details Confirmation with request number via email
FR-2	Approval Workflow	Automatic routing to the manager / budget approver using Flow Designer Approve or reject with comments Reminders and escalation for pending approvals
FR-3	Order Processing	Stock check against the asset inventory Automatic purchase order creation for approved requests Purchase order sent to the vendor
FR-4	Delivery & Asset Management	Recording of laptop receipt and asset record creation Hand-over task for IT and assignment of the laptop to the employee Automatic closure of the request after hand-over
FR-5	Tracking & Notifications	Real-time request status for the requester Email / portal notifications at every status change
FR-6	Administration & Reporting	Configuration of approvers, rules and budget limits without code Dashboards for approval time, order volume and delivery time Logging of failed or stalled flow executions

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The laptop request form is simple and guided, with pre-filled fields and drop-down lists, so a requester can submit a request in a few minutes without IT help. It works on web and mobile views of the service portal.
NFR-2	Security	Access is role-based, so only requesters, approvers, procurement officers and administrators see the data they need. Approvals and purchase orders are logged in an audit trail, and data is protected in transit and at rest.
NFR-3	Reliability	The flow runs consistently with no lost requests or duplicate orders. Failed flow executions are logged and flagged for retry, and every request keeps a complete, traceable history.

NFR No.	Non-Functional Requirement	Description
NFR-4	Performance	Requests are confirmed and routed for approval within seconds of submission, and notifications are sent promptly. Approved standard laptop requests generate purchase orders without manual delay.
NFR-5	Availability	The request portal and workflow are available during business hours with minimal downtime. Planned maintenance is scheduled outside peak request periods.
NFR-6	Scalability	The solution handles growth in employee headcount and bulk onboarding requests, and can be extended to other standard equipment such as monitors and accessories by adding new catalog items and flows.
