Streamlining IT Procurement

Based on the personas from the problem statements:

PS-1 IT Procurement Officer

PS-2 New Employee / Hiring Manager

Automating Standard Laptop Orders with Flow Designer

SCENARIO

Requesting, approving, ordering and receiving a standard laptop for a new employee

1 Entice

Howdoessomeone initially become aware of the need for a laptop?

2 Enter

Whatdopeople experience as they begin the laptop request?

3 Engage

Inthecoremoments of the process, what happens?

4 Exit

Whatdopeople typically experience as the process finishes?

5 Extend

Whathappensafter the laptop has been delivered?

Steps

Whatdoes the person (or group) typically experience?

- **New hire confirmed** — HR confirms a joining date and the manager realises a laptop is needed
- **Check laptop policy** — Manager looks up which standard laptop model fits the employee's role
- **Find the request form** — Looks for the right place to raise the request, or emails IT directly
- **Open laptop request** — Requester opens the standard laptop catalog item on the service portal
- **Provide details** — Fillsin employee name, role, location, joining date and laptop model
- **Submit & confirm** — Submitsthe request and receives a request number
- **Approval routing** — Flow Designer routes the request to the manager and budget approver
- **Check stock & raise PO** — Procurement checks inventory and creates a purchase order for the standard model
- **Vendor order & tracking** — Orderis placedwith the vendor and delivery progress is tracked
- **Laptop received** — Laptop arrives andis logged in the asset inventory
- **Configure & hand over** — IT images the device and hands it over to the employee
- **Request closed** — Requestis closedand the requester is notified
- **Asset record updated** — Laptopis linked to the employee in the asset register
- **Share feedback** — Requester is asked to rate the request experience
- **Review & improve** — Procurement team reviews turnaround time and error rates

Interactions

What interactionsdo they have at each step? People, places and things (digital touchpoints or objects).

- HR email or onboarding checklist
- Manager's inbox
- Intranet policy page or IT portal
- Colleagues or the IT service desk
- Service portal
- Email to the IT or procurement team
- Service portal on web or mobile
- Catalog item form fields
- Manager or HR for missing details
- Confirmation screen
- Confirmation email
- Approver's email or portal notification
- Approvers (manager, finance)
- Asset inventory records
- Procurement system and vendor catalog
- Vendor portal or email
- Request status page
- Receiving desk or IT store
- Asset management records
- IT technician
- New employee
- Closure email or portal notification
- Asset management system
- Survey email or portal pop-up
- Reports and dashboards
- IT procurement team

Goals & motivations

At each step,what isaperson's primary goal or motivation? ("Help me..." or "Help me avoid...")

- Help me make sure the new hire has equipment on day one
- Help me avoid choosing the wrong model or specification
- Help me raise the request quickly without chasing anyone
- Help me start the request without needing IT's help
- Help me enter the right details only once
- Help me feel confident that the request has been received
- Help me get approval quickly with all the information I need
- Help me order the right model without retyping details
- Help me know when the laptop will arrive
- Help me confirm that the right device has arrived
- Help me get a working laptop ready for day one
- Help me know the request is complete and what to do next
- Help me keep accurate records for audits and support
- Help me share what went well and what did not
- Help me see where delays still happen

Positive moments

Whatsteps doesatypicalperson find enjoyable, productive, motivating or delightful?

- Excitement about a new team member joining
- The service portal offers one familiar place to ask for IT items
- A single catalog item makes the start simple
- Instant confirmation with a request number
- Approvers can approve in one click from the notification
- Standard models mean no new quotes or negotiations
- Status updates show that real progress is being made
- Standard models arrive consistent and ready to configure
- The employee starts work with the right equipment
- A clear closure message ends the chasing
- Reliable records make audits and support easier
- A short survey is easy to answer
- Data shows how much time automation saves

Negative moments

Whatsteps doesatypicalperson find frustrating, confusing, costly or time-consuming?

- Equipment is often remembered too late, just days before joining
- Standard models are hard to find and the policy is spread across documents
- Requests sent by email get missed or duplicated
- Missing or wrong details cause back-and-forth later
- The same details get re-typed into emails and spreadsheets
- Manual requests often get no confirmation at all
- Manual approvals stall when approvers are busy or away
- Approvals are chased through emails and calls
- Creating each purchase order by hand is slow and error-prone
- Requesters cannot see where their order is, so they keep asking IT
- Receipt is logged by hand, so asset records fall behind
- Late delivery leaves new hires waiting without a laptop
- Requests stay open because nobody remembers to close them
- Feedback is rarely collected for manual requests
- Manual processes leave no data to measure delays

Areas of opportunity

How might we makeeachstepbetter? What ideas do we have?

- Auto-trigger a laptop request when HR creates a new-hire record
- Show the standard laptop options clearly in one catalog item
- Make the laptop catalog item the single, easy-to-find entry point
- Pre-fill requester and department details from their profile
- Use mandatory fields and drop-down lists to prevent errors
- Send an automatic confirmation with a link to track status
- Auto-approve standard laptops within budget; add reminders and escalation
- Auto-create the purchase order from the approved request; use available stock first
- Push status updates to the requester automatically
- Alert the team if delivery may miss the joining date
- Create the asset record automatically on receipt
- Create setup tasks for IT as soon as the order is placed
- Auto-close the request when the hand-over task is done
- Link the asset record to the employee automatically
- Trigger a one-click satisfaction survey when the request closes
- Build dashboards for approval time, cost and delivery time
