Project Design Phase
Proposed Solution Template

Date	02 October 2026
Team ID	SWTID-2026-5435
Project Name	**Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer**
Maximum Marks	**2 Marks**

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	**Problem Statement (Problem to be solved)**	Standard laptop requests are still handled through manual emails, spreadsheets and repeated follow-ups for approvals. This causes delays, errors in purchase orders and no visibility of request status. IT procurement officers spend time on routine orders, and new employees may not have a laptop on their joining date because there is no automated workflow to capture the request, route approvals and raise the purchase order.
2.	**Idea / Solution description**	Automate the standard laptop ordering process using Flow Designer: •A catalog item on the service portal captures the request with the employee, role, location and joining date •A flow routes the request to the manager / budget approver, with reminders and escalation •After approval, the flow checks stock and creates the purchase order for the vendor automatically •Requesters and approvers are notified at every status change, and the request closes after hand-over •Dashboards show approval time, order volume and delivery time
3.	**Novelty / Uniqueness**	•Covers the full cycle from request to approval, purchase order, delivery and closure in one flow •Built with low-code Flow Designer, so approvers and rules can be changed without writing code •Focuses on standard laptop models, which allows auto-approval within budget and no new quotes •Works inside the portal and email tools people already use, so little training is needed
4.	**Social Impact / Customer Satisfaction**	•New employees get their laptop on time and start work productively •Requesters can track their request and no longer need to chase IT •Procurement officers spend less time on routine orders and more on higher-value IT work •Fewer errors and a clear audit trail improve trust and compliance

S.No.	Parameter	Description
5.	**Business Model (Revenue Model)**	This is an internal solution, so value comes from cost and time savings rather than sales revenue: •Less staff time spent on manual orders and follow-ups •Fewer ordering errors and rework, and no idle new hires waiting for equipment •Standardised purchasing that supports better vendor pricing •Can be offered as a shared service to other departments or business units
6.	**Scalability of the Solution**	•Runs on a cloud platform that can handle growth in headcount and bulk onboarding •Reusable flows and subflows allow other standard items (monitors, accessories) to be added as new catalog items •Approval rules and budget limits are configurable, so it can extend to more teams, locations and vendors
